

A study on the construction of humanities data that fits the concept of Glocal

Kim Ba-ro(Center for Digital Humanities, Academy of Korean Studies)

This presentation suggested the Humanity-based LOD in order to establish humanity data of the glocal concept in regional studies. For specific demonstration, the researcher 1) chose ‘職員錄’, which is the list of the occupying Japanese government still remaining in South Korea and Taiwan; 2) gathered and analyzed the data of ‘職員錄’ in National Institute of Korean History and the Central Research Institute of Taiwan; 2) designed the ontology that fits into the ‘職員錄’ data, and 3) established the system concept to realize the META-職員錄 LOD service for linking up the 職員錄 LOD service of South Korea and that of Taiwan. Lastly, with the case of 職員錄 LOD, the researcher presents the concept of LOD based on humanity as the directionality for the establishment of humanity data in the future.

- The link-up example for 職員錄 data using LOD services.
